New Google Meet Features:

First feature is noise cancellation:

Turn on noise cancellation

Noise cancellation is off by default but can be turned on or off before or during a video call.

Before a video call

1. Go to meet.google.com ＞ select a video call.
2. Before you join, on the top right, click More options ⋮ ＞ Settings ⚙.
3. Click Audio 🔊.
4. Turn on **Noise cancellation.**
5. Click **Join now.**

In a video call

1. On the bottom right, click More options ⋮ ＞ Settings ⚙.
2. Click Audio 🔊.
3. Turn on **Noise cancellation.**

Tip: To check how much noise is cancelled out, next to your self preview at the top right corner of your screen, look at the Voice indicator 🔊. The Voice indicator reflects what others may hear. Sounds that are blocked and cannot be heard by others will not move the indicator line.
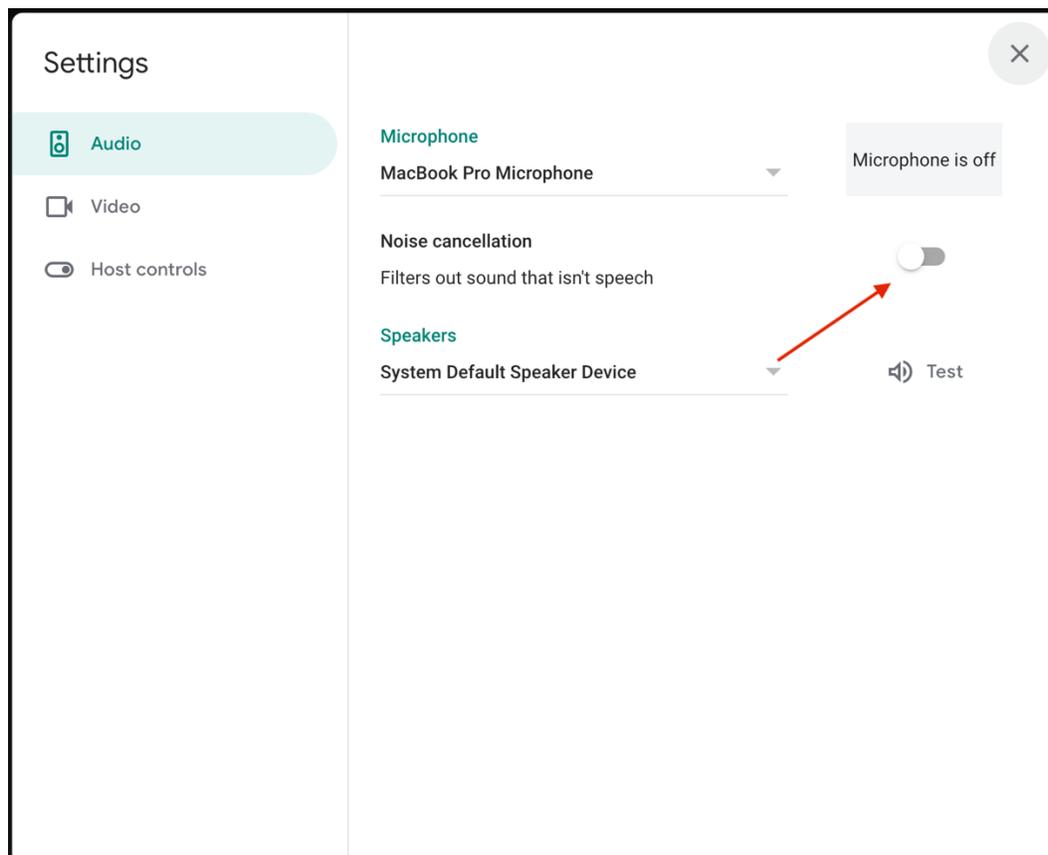

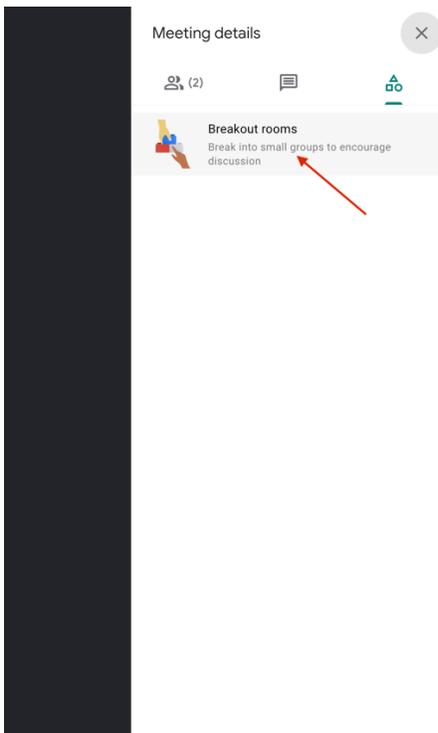

They have also finally added the feature everyone has been waiting for, Breakout Rooms:

While in your Google Meet click on the "Activities" Icon.
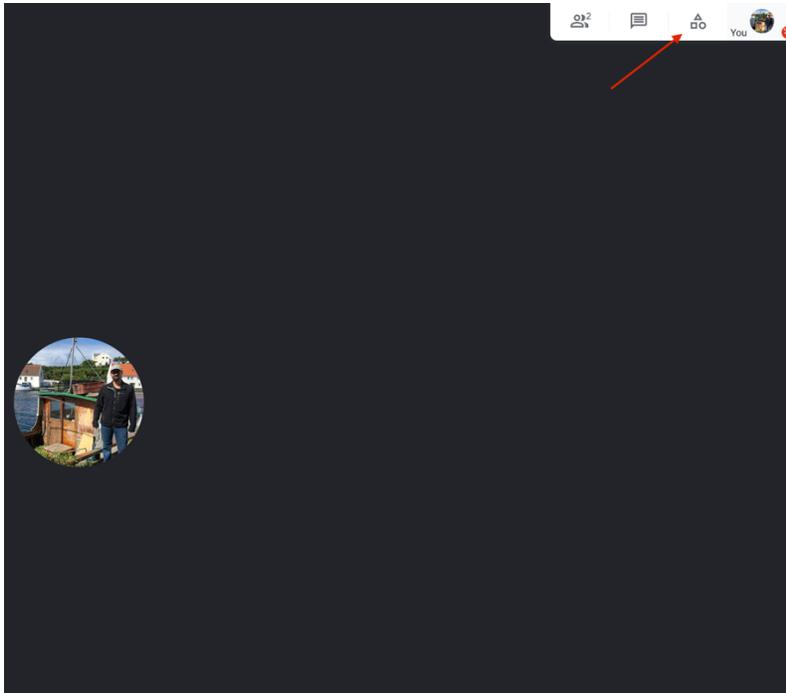

Then Choose the Breakout Rooms:

You can then choose how many rooms you want to create:

From there you can just drag the users to the room you want them to be in.
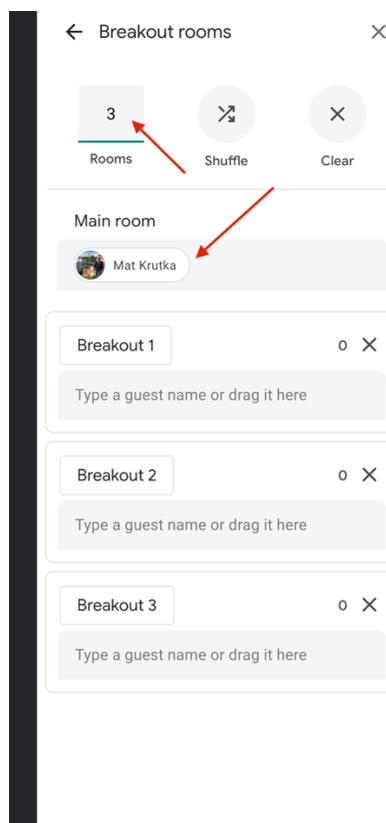

Features that are coming soon:

Hand raising: Increase participation in larger meetings by enabling participants to "raise their hands" when they have a question or something to say.

Meeting attendance: Give meeting hosts a simple way to see who attended their meeting.

Q&A: Provide a channel for the audience to ask questions without disrupting the flow of the conversation.

Polling: Engage participants in large meetings with real-time polling.

Additional moderator controls: Give meeting hosts additional controls for muting, presenting, joining, and more.
